

Coffee Sales Analysis Report

Introduction

The Coffee Sales Dashboard is an interactive business intelligence solution developed in Microsoft Excel to analyze coffee sales performance. The dashboard transforms raw sales data into meaningful visual insights, enabling management to monitor sales trends, customer performance, and geographical sales distribution. Various Excel features such as Pivot Tables, Pivot Charts, Timelines, Slicers, and Lookup Functions were utilized to create a dynamic and user-friendly dashboard.

Project Objectives

To analyze coffee sales performance over different time periods.

To identify the best-performing coffee products.

To evaluate sales distribution across countries.

To determine the highest-value customers.

To provide an interactive dashboard for data-driven decision-making.

Tools and Techniques Used

Microsoft Excel

Excel Tables

XLOOKUP Functions

Pivot Tables

Pivot Charts

Timelines

Slicers

Conditional Formatting

Data Visualization Techniques

Dashboard Overview

The dashboard contains multiple interactive components that allow users to filter and analyze sales data efficiently.

Interactive Filters

The dashboard includes the following filters:

Order Date Timeline

Roast Type (Dark, Light, Medium)

Package Size (0.2 kg, 0.5 kg, 1.0 kg, 2.5 kg)

Loyalty Card Status (Yes / No)

These filters enable users to explore sales performance from different perspectives.

Sales Performance Analysis

Total Sales Over Time

The line chart displays monthly sales trends from 2019 to 2022 across four coffee varieties:

Arabica

Excelsa

Liberica

Robusta

The analysis shows fluctuations in monthly sales, indicating changing customer demand throughout the years. Certain periods experienced significant sales spikes, particularly during 2021 and early 2022, suggesting seasonal demand patterns or successful sales campaigns.

Sales by Country

The country-wise sales chart reveals the following results:

United States: \$35,639

Ireland: \$6,697

United Kingdom: \$2,799

The United States is the dominant market, generating the vast majority of total sales. Ireland ranks second, while the United Kingdom contributes the lowest sales among the three countries analyzed.

Top 5 Customers

The dashboard identifies the highest-value customers based on total purchases:

Allis Wilmore – \$317

Brenn Dundredge – \$307

Terri Farra – \$289

Nealson Cuttler – \$282

Don Flintiff – \$278

These customers represent important revenue contributors and may be targeted for loyalty programs, special promotions, and customer retention strategies.

Business Insights

The United States is the strongest revenue-generating market and should remain a primary focus for marketing efforts.

Coffee sales demonstrate periodic fluctuations, highlighting the importance of demand forecasting and inventory planning.

A small number of customers contribute significantly to overall sales, indicating opportunities for customer relationship management initiatives.

Interactive filters allow management to analyze sales by roast type, package size, and loyalty card membership, helping identify profitable customer segments.

Different coffee varieties exhibit varying sales trends, providing valuable information for product portfolio management.

Benefits of the Dashboard

Provides real-time business performance monitoring.

Simplifies large datasets through visual representation.

Improves strategic decision-making.

Enhances customer and market analysis.

Supports sales forecasting and business planning.

Reduces manual reporting effort and analysis time.

Conclusion

The Coffee Sales Dashboard successfully converts raw transactional data into actionable business insights. Through the use of advanced Excel tools and interactive visualizations, the dashboard enables efficient monitoring of sales trends, customer behavior, and market performance. The findings indicate that the United States is the most profitable market, while several key customers contribute substantially to revenue generation. Overall, the dashboard serves as an effective decision-support system for improving sales performance and business growth.
